

Voice-Clone Red-Flag Checklist

9 Warning Signs — Print for the Fridge

☐ Voice-Clone Red-Flag Checklist

The 9 Warning Signs

A call is **AI-generated or fraudulent** if ANY of these appear:

1. 📞 **The panic hook** Instant emergency: jail, hospital, lawyer, stranded, “I need bail.”
2. ☐ **Secrecy pressure** “Don’t tell anyone.” “Don’t call the office.” “This stays between us.”
3. ☐ **Money in a hurry** Wire, gift cards, crypto, CashApp, Zelle — “it has to be right now.”
4. ☐ **Wrong safe word** Asked for the family word and got silence, deflection, or a guess.
5. ☐ **Missed bait question** Vague answer, changes the subject, “why are you asking that?”
6. ☐ **No video** Excuses when asked to FaceTime: bad connection, camera broken, “I’m in a meeting.”
7. ☐ **Spoofed caller ID** Number looks right — but calling it back doesn’t reach them.
8. ☐ **“The sound is bad”** The classic clone cover story for audio glitches. Real people don’t say this on every call.
9. ☐ **The ask is off-pattern** A request that never happens in your family’s real relationship. Your daughter has never once asked you for money — now it’s an emergency?

If 2+ flags are present:

☐ **HANG UP.**

☐ **VERIFY** — safe word, bait question, video, call-back.

☐ **CHALLENGE** — “What’s the word? What did we eat at Grandma’s 80th?”

☐☐☐ **ESCALATE** — call the real person, post in the family group, and if money moved, run the 72-Hour Recovery Playbook.

The Golden Rule

Never verify WITH the caller. Verify the caller against what YOU already know.

A voice clone can copy sound. It cannot copy secrets. The moment you ask for the word, the scammer's script is over.
